digi test II & digi test *Easy*

digi test II

The digi test was launched in 2000 as the successor to the U72/80E and has since been used by many customers worldwide. The digi test is a testing device that could meet all possible requirements of our customers: interchangeable measuring devices for Shore and IRHD and the possibility to test very thin samples from 1.5 mm.

Based on this proven technology, we now offer a budget-friendly version for IRHD Micro and IRHD Normal. The digi test easy replaces the previous semi-automatic Compact III.
